

AMERIKRAFT™ SYNTHETIC WOOD FURNITURE

*The great look of wood,
but with easy care, maintenance
and great environmental advantages.*

Little maintenance is required to keep Amerikraft™ Furniture looking good. Hot soapy water to remove dirt and debris is the best choice for cleaning our synthetic wood products. Amerikraft is a hard material with a non-porous surface, therefore it does not readily stain and most spills do not stick.

The use of recycled polystyrene in our products, helps to address government, local authority and business concerns about landfill and recycling requirements. Amerikraft is a realistic alternative to hardwood and contributes to the reduction of deforestation of our hardwood forests.

Amerikraft Furniture is extruded to its finished shape and color, meeting customer requirements, and reducing material waste. Although our furniture can be painted and stained with wood stains, this is not a necessity, as the furniture's color is produced during production. This avoids using chemically based stains, paints and solvents that can be harmful to the environment.

ENVIRONMENTAL ADVANTAGES

- Addresses government concerns of landfill and recycling requirements
- Reduces deforestation of our hardwood forests
- 100% recyclable in both manufacturing & post consumer use
- Extruded to its finished shape and color reduces waste and the use of environmentally harmful paints, stains and solvents

Item #5405
Five Foot Walnut Bench

Item #5561 Side Table
Round & Square options

Item #5406
Six Foot Red Cedar Bench

Item #5548R
Round Slatted Table
