Care & Maintenance

AMERIKRAFT™ looks like wood with a wide-ranging choice of finishes and offers an engineered solution with the following characteristics:

- Weather Resistant
- Maintenance Free
- Insect Resistant
- Non Slip Surface
- UV Stable
- No Secondary Processing/Handling
- Does Not Rot
- Can Be Nailed, Screwed and Sawn Like Wood
- Water Repellent
- Thermally Efficient
- Can Be Recycled

AMERIKRAFT™ has many environmental advantages:

- The use of recycled polystyrene helps to address government, local authority and business concerns of landfill and recycling requirements.
- AMERIKRAFT™ is a viable and realistic alternative for hardwood, and therefore contributes to the reduction in deforestation of our hardwood forests.
- AMERIKRAFT™ is 100% recyclable both during the process of manufacture and post consumer use.
- AMERIKRAFT™ is extruded to a finished shape and color to meet customer requirements, thereby reducing to a minimum, waste in application. Although it can be stained with wood stains, this is not a necessity, as the color is produced during the process thus avoiding the use of chemically based stains, paints and solvents.

Maintenance:

Little maintenance is required to keep AMERIKRAFT™ material looking good. The product should be cleaned as needed to remove dirt and debris. No abrasive or harsh chemicals should be used on the product. Aromatic solvents (e.g. toluene, xylene) or cleaners containing aromatic solvents (e.g. Citri-Solv) should never be used on AMERIKRAFT™ materials.

Cleaning:

Hot soapy water is the best choice for cleaning AMERIKRAFT™ material. AMERIKRAFT™ is a hard material with a non porous surface, therefore it does not readily stain and most spills do not stick. Any water-based household cleaner can be used to clean the surface, including Windex, 409, Pledge, Murphy's Oil Soap, Simple Green and citrus cleaners. Avoid any cleaner that contains solvents or harsh chemicals. If unsure of the cleaner, test on a small area before cleaning. Although not commonly necessary, AMERIKRAFT™ materials can be pressure-washed.
